Frymaster/DEAN – Upcoming Price Adjustment on Select Equipment

Dear Valued Partners,

Despite our ongoing efforts to manage rising costs through targeted mitigation strategies, the continued impact of tariffs and inflation has made it impossible to fully absorb these increases without affecting product and service reliability.

To maintain the high standards you expect from us, we will be implementing a **3% price increase** on all **accessories and equipment manufactured in the United States**, effective **January 1, 2026**, for all new purchase orders.

This adjustment reflects only the portion of cost increases that cannot be offset through internal efficiencies and is necessary to ensure continued product quality and service excellence.

Please note: This change **does not affect pricing** for products manufactured in China, including **SRs, GFs, ESG35T, PFs, SDUs, and CDCs**.

We appreciate your understanding and continued partnership. If you have any questions or need assistance planning for this change, please don't hesitate to reach out to your account representative.

Best regards,

Oscar Villa
President, Frymaster/DEAN
