2026 Price Adjustment Announcement

To Our Valued Partners,

As we look ahead to the coming year, we want to take a moment to share an important update and reaffirm our ongoing commitment to the partnerships that have built Krowne. The landscape of our industry continues to shift, and like many manufacturers, we are navigating cost increases related to materials, labor, and global supply dynamics.

On February 1st, 2026, Krowne will be implementing a small price adjustment. As always, this adjustment reflects a targeted approach within specific product categories and does not represent a broad, across-the-board increase. The overall average price increase is approximately 2.6%. Our approach remains deliberate: we evaluate each product individually and adjust only where necessary. Many prices will remain the same, some will decrease, and others will increase as needed.

You will receive an updated price list in the next two weeks to support your planning.

We are also excited to announce that our new Smart Factory is fully operational. This advanced manufacturing facility marks a major milestone for Krowne, resulting in a 50% increase in production capacity. This expanded production and automation allows us to reduce lead times and focus on premium product expansion. Additional updates on the facility and its impact on our operations will be shared in the months ahead.

Thank you for your partnership, your trust, and the collaborative spirit that has allowed us to grow together. We look forward to supporting your success throughout 2026 and beyond with the quality, support, and reliability you expect from Krowne.

With gratitude,

Kyle Forman
President
Krowne
